

Fact Sheet

I would like to introduce you to Eloro Resources Ltd. (ELO.V), an exploration company with two key properties and a management team with previous successes www.elororesources.com

Eloro Management:

- Own 39.7% of shares outstanding
- Tom Larsen (CEO) - Former CEO Champion Minerals / CEO Cartier Iron Corp.
- Bill Pearson (Chief Technical Advisor) - Former VP Exploration Desert Sun Mining, Senior VP Central Sun
- Osvaldo Arce (Bolivian Geo) – 25 years experience. President of the Bolivian Geological Society (2010-2017). Written 2 books on Bolivian Geology. Doctorate in mining engineering University of Tokyo.

Key Assets:

ISKA ISKA (Potosi Province in Bolivia)

- Fraser Institute 2019 Mining Survey shows dramatic improvement over the past three years with a general ranking of 62.4 out of 100, up from 34.0 in 2017 for Bolivia
- 900 Ha. (9 SqKm) concession accessible by road, royalty free property, which is wholly owned by the title holder
- Although former mining adits exist from title holder, the **property has never been drilled but workings allow us to drill underground via existing permits**
- A polymetallic (Ag, Zn, Pb, Au, Cu, Bi, Sn, In) epithermal-porphyry complex. The main potentially economic metals are gold, silver, zinc and lead. Byproducts can be bismuth, copper and indium
- Former historical underground workings allowed for channel samples to be taken of both mineralization and altered wallrock. Sample widths ranged between 1.20 m to 5.55 m with an average of 2.90 m.
- **The channel sampling program confirmed extensive and significant polymetallic mineralization as follows:**
 - **Silver (Ag) values range between 35.5 - 694 g/t Ag (46% of channel samples)**
 - **Gold (Au) values range between 0.31 - 28.6 g/t Au (42% of channel samples)**
 - **Zinc (Zn) values range between 1.05 - 16.95% Zn (37% of channel samples)**
 - **Lead (Pb) values range between 0.41 - 16.95% Pb (49% of channel samples)**
- Drill ready once mapping is complete, drilling permits in place

La Victoria (Peru)

- 16 concessions, 8,930 ha (89.3 km²) 82% owned asset in a stable, mining-friendly jurisdiction, within sight of world-class, low-cost producing gold mines
- **Low Sulphidation Epithermal Deposits as Rock types, alteration style and mineralization are similar to producing gold mines in Northern Peru Gold Belt**
- **Successful First Reconnaissance Drilling at Rufina Target, intersected a major gold-bearing low sulphidation epithermal system extending approximately 350m along strike**
- Expecting further drilling permits to be in place late April

Key Dates:

March/April:

- NI43-101 Property of Merit Technical Report on ISKA ISKA
- Mineralogy testing (Lisa Can analytics)
- Assay results from channel samples
- Mapping and drill locations set

May:

- Provided funding for ISKA ISKA, Eloro could be drilling for high profile targets on both properties – La Victoria 2000m; ISKA – 1500-2000m
-
